**Intended Use:** Landscape applications, Light to Moderate Traffic, Multi-purpose.

*"The Gold Coast is the longest, heaviest, most thick, lush turf available not just within the ChiTurf product line but also virtually anywhere on the market globally. It's a great turf grass for light to medium traffic, high visibility applications and applications requiring the highest GMAX without added sub layer foam padding. To anyone dead set on making a turf selection solely based on how the turf looks and feels to the touch with the highest quality built in...touch a sample of the Gold Coast and it's a done deal; there's virtually nothing on the market nationwide or globally you will find comparable. Beautiful turf, cutting edge state of the art manufacturing."*
